Gazelle DAO: Empowering Enterprises and Decentralized Innovation

Index

Abstract

Gazelle DAO is an ambitious project that aims to support Enterprise's DAO and foster decentralized innovation. In this whitepaper, we introduce its core components, including Launchpad, a platform that enables individuals and teams to create their own lockdrops. It also outlines Gazelle's governance structure DAO, which empowers stakeholders to make key decisions and ensures transparency and trust within the ecosystem. Finally, we introduce $**HONK** tokenomics.

Introduction

Gazelle DAO is driven by a mission to support Enterprise projects and enable decentralized innovation. Aiming to surpass the achievements of LION DAO, Gazelle aims to provide a comprehensive ecosystem that promotes and empowers ambitious initiatives. With the Launchpad feature, Gazelle DAO enables individuals and teams to create their own lockdrops, providing a unique opportunity for project launches and community engagement. In addition, Gazelle DAO establishes itself as a key facilitator, facilitating contributions and sharing the profits with stakeholders.

1.1 The Launchpad

The Launchpad is a groundbreaking feature introduced by Gazelle DAO that provides a platform for individuals and teams to create their own lockdrops. The lockdrop mechanism allows participants to deposit native tokens into a smart contract, locking them for a specified period of time. A portion of the locked tokens goes as a fee to the team launching the token and to Gazelle's DAO treasury. This approach ensures that Gazelle DAO remains sustainable and is able to support future initiatives and allow the team to fund their development.

1.2 Governance

Gazelle DAO is built on a solid governance framework that allows stakeholders to set the direction of the ecosystem. Stakers within Gazelle DAO have the power to decide

whether a proposed Launchpad project is accepted or rejected. To participate in Launchpad, project teams must meet certain criteria. These include conducting an audit, implementing a timeline for releasing their own funds, avoiding any token distribution prior to Launchpad, and demonstrating trustworthiness. By adhering to these standards, Gazelle DAO ensures that only high-quality projects are accepted into the ecosystem, which promotes trust and mitigates risk for stakeholders.

1.3 Tokenomics

Tokenomics within Gazelle DAO is designed to incentivize stakes and reward active participants. Stakers receive rewards based on their share of the ecosystem. The more frequently the Launchpad is used, the higher the annual percentage (APR) for Stakers, so there is a direct correlation between ecosystem use and earnings from deployments. This mechanism encourages engagement and participation and aligns stakeholder interests with the growth and success of Gazelle DAO. The governance will decide the emission of $**HONK** during time and the use of the treasury.

1.4 Conclusion

Gazelle DAO is a visionary project that aims to empower Enterprise and drive decentralized innovation. With the Launchpad, Gazelle DAO introduces a groundbreaking platform for project launches that encourages community engagement and participation. Through its robust governance structure, Gazelle DAO ensures transparency and trust and enables stakeholders to actively participate in decision-making processes. Gazelle DAO's tokenomics incentivize outreach and aligns participants' interests with the growth and success of the ecosystem. With Gazelle DAO, the future of enterprise-level initiatives and decentralized innovation is bright and promising.
